

9) The following output will be given after the following command executed. Pls the difference of libXext.a, libXext.so, libXext.so.6 and libXext.so.6.4.0. In what formats of the same library exist? What is their specific purpose?

```
$ ls -l libXext.*  
-rw-r--r-- 1 root root 78420 2009-10-12 18:01 libXext.a  
lrwxrwxrwx 1 root root 16 2010-10-22 15:47 libXext.so -> libXext.so.6.4.0  
lrwxrwxrwx 1 root root 16 2010-10-22 15:53 libXext.so.6 -> libXext.so.6.4.0  
-rw-r--r-- 1 root root 60024 2009-10-12 18:01 libXext.so.6.4.0
```

10) How many ipc (inter-process communication) mechanisms are there in Linux?

11) What is the mechanism to access a global variable for two Linux threads?

12) What is the difference of the two system calls "select" and "poll"?

13) How to avoid deadlock between linux threads? How to test your code whether it is deadlock or not?

14) Pls draw a memory layout of linux process.
